

Portfolio Documentation

Blazor WebAssembly Portfolio - Dawid Bogocz (DzeyD)
<https://github.com/dawidbogocz/portfolio>

1. Project Structure

```
Portfolio/  
  Portfolio.sln  
  src/Portfolio.Web/  
    Program.cs          - Entry point  
    App.razor           - Router root  
    _Imports.razor      - Global usings  
    Layout/MainLayout.razor - Root layout  
    Components/  
      Navigation.razor   - Nav bar + theme dots  
      Hero.razor         - Hero section  
      AboutSection.razor - About me  
      ExperienceSection.razor - Work history  
      ProjectsSection.razor - Project cards  
      GamesSection.razor - Game placeholders  
      ContactSection.razor - Contact links  
    Services/ThemeService.cs - Theme state  
  wwwroot/  
    index.html          - Host page  
    css/app.css         - All styles  
    js/app.js           - Theme, scroll, scrollspy
```

2. How To Edit Content

```
Name, tagline    -> Components/Hero.razor  
About section   -> Components/AboutSection.razor  
Experience       -> Components/ExperienceSection.razor  
Projects        -> Components/ProjectsSection.razor  
Games           -> Components/GamesSection.razor  
Contact info    -> Components/ContactSection.razor  
Nav links       -> Components/Navigation.razor  
Theme colors    -> Services/ThemeService.cs + css/app.css  
All styles      -> wwwroot/css/app.css  
JS behavior     -> wwwroot/js/app.js
```

3. Adding a New Section

1. Create Components/YourSection.razor
2. Add nav link in Navigation.razor:
`<a class="nav-link" href="#yourid">Name</a>`
3. Add in MainLayout.razor:
`<section class="section" id="yourid">
 <YourSection />
</section>`
4. Add styles in app.css

4. Adding Projects

Copy a .project-card block in ProjectsSection.razor:

```
<div class="project-card">  
  <div class="project-card-header">
```

```
        <a href="URL">Name</a>
    </div>
    <p class="project-card-desc">Description</p>
    <div class="project-tags">
        <span class="tag">Tag</span>
    </div>
</div>
```

5. Themes

4 themes: vsdark, godot, monokai, light

To add a theme:

1. Add to ThemeService.AllThemes
2. Add [data-theme='name'] CSS in app.css
3. Add theme-dot button in Navigation.razor

6. How To Deploy

```
cd src/Portfolio.Web
dotnet publish -c Release -o ../../publish
sudo cp -r ../../publish/wwwroot/* /var/www/portfolio/
sudo chown -R caddy:caddy /var/www/portfolio
sudo caddy reload
```

7. Access

Local: http://localhost:3000

Tailnet: http://100.77.251.25:3000
